

I completed my Ph.D. in biophysics from the University of Wisconsin Madison (U.S.A.) in 2011 and was subsequently a postdoctoral fellow with Prof. Lewis E. Kay at the University of Toronto (Canada) till 2017. I joined the Molecular Biophysics Unit (MBU, IISc) in November 2017. My research interests lie in biomolecular nuclear magnetic resonance (NMR) spectroscopy and in using it to study protein structure, dynamics and function.
